CHILD & PET SAFE

Ecofective Lawn Feed + Root Enhancer Mini Granules are natural ready to use granules with seaweed + mycorrhizae. Mycorrhizae work symbiotically with the grass roots for improved health and greener growth. The feed can be applied during drought conditions, if watered in or will activate when it rains. Children and pets need NOT be excluded from treated areas once applied.

WHEN AND HOW TO USE

Best results are achieved when product is applied after mowing, and the removal of grass cuttings and weeds by their roots.

Apply between March - September every 8-10 weeks when no frost is present or expected. The feed can be applied during drought conditions, if watered in.

Mark up the area before application – this helps to give an even application of the product. Before opening the box shake the contents thoroughly as they may settle in transit. Pull tab to open on the side panel for easy application.

Apply 27g to 1 square metre (1oz/sq yard)

DO NOT exceed the maximum recommended rate of 27g/sq m.

Overdosing with fertiliser can damage your lawn.

Apply evenly to achieve the same good results over all the lawn.

ANALYSIS

Organic based compound NPK 9-7-7

Nitrogen (N)	**Total 9.0%**
Phosphorus Pentoxide (P_2O_5)	**Total 7.0% (3.1%P)**
Phosphorus Pentoxide soluble in water	5.0% (2.2%P)
Potassium Oxide (K_2O) soluble in water	**Total 7.0% (5.8%K)**

SAFETY INFORMATION

Once applied the product is safe for children and pets to use the treated area.
Store the packed product out of reach of children and pets.
If handling although not required it is good practice to wear gloves.
Wash hands after use

Precautions

Store in cool dry conditions
Protect from frost.
Contents may settle during transit

CHILD & PET SAFE

WHY PROFESSIONALS USE THIS PRODUCT

- Odourless granules
- Excellent growth results Grass grows thicker and stronger to out-compete the growth of weeds & moss in the lawn
- Nutrients rapidly reach the roots on application when mini-granules are watered in
- Improves drought and stress resistance
- Natural prolonged release of nutrients into the soil over 8 - 10 weeks

Helps grass to out-compete weed & moss in lawns by providing the essential nutrients for good growth.

Mycorrhizae improve the root system and work symbiotically with the grass roots for a stronger root system and greener lawn.

BENEFITS OF MYCORRIZAE

Mycorrhizal fungi form a mutually beneficial relationship with the grass root system, stimulating lawns to grow thick and lush. The fungi attach to the grass roots, increasing their footprint & depth to improve uptake of micro-nutrients and availability of water from the soil.

While soils in natural settings are full of beneficial soil organisms, including mycorrhizal fungi, garden lawns, where the soil has been tilled/de-weeded prior to seeding or laying of the turf, lack the numbers of mycorrhizal fungi, or have none.

To have healthy soil and a thriving lawn, you need to re-establish these beneficial fungi.

Once mycorrhizae are established in your lawn, you can expect a wide variety of benefits:

- Robust, lush, and greener lawns
- Healthy and enlarged root systems
- Improved drought resistance
- Increased response to fertiliser application
- Increased resistance to pests and diseases
- Improved soil quality - drainage and air movement
