## PLANT DISEASE DEFENCE

A ready to use spray that contains natural extracts specifically derived from fungi. When sprayed onto leaves it is known to elicit the plants natural immune response i.e. its own self-defence mechanisms to stress and plant pathogens. This builds the plant's resistance to common garden diseases.

**Application:** ecofective® Plant Disease Defence should be applied to foliage and can be used on all plant types. For best results, always apply to growing plants before first signs of disease. Repeat applications weekly, especially during main growing season. Possibly reduce applications to every 2 weeks after main plant growth. Re-apply if it rains within 48 hours. **Cease applications 10 days prior to harvest of edible plants.**

**How to use:** Shake bottle. Twist nozzle to the 'ON' position. Spray plants lightly up till run off from leaves. When finished turn the nozzle back to the 'OFF' position.

**Advice:** Avoid spraying tender plants, in direct sunlight on days of high heat intensity. If applying another product, wait for leaves to dry first. Preferably apply other product on separate days. The product does not contain any animal by-products.

**Content:** Contains a pure and natural fungal extract (Listed Basic Substance) which has known antioxidant and plant biostimulant qualities, giving the plant the ability to defend itself and grow healthily.

**Precautions:** Keep away from children. If medical advice is needed, have product container or label to hand. Wash hands after use. Store upright in transit and storage. Store in a cool place between 10°C - 25°C. Store out of direct sunlight.

\*Safe to use around children and pets when following the labels instructions for use.
