ecofective® Slug Barrier Defence Granules are a natural ready to use granule that can be applied around the base of edible and ornamental plants both in the garden and plant pots, to protect against slug and snail damage. This product is derived from natural ingredients and repels the slugs and snails.

#### Instructions for use

**Garden areas:** When planting out into the garden areas, unless new compost is used, then slugs may be present in the planting area. To protect your plants, ensure you place the barrier granules close to the stem of the plant in a complete circle using up to 15g-20g (small handful) of the product, applying this up to 20cm in height.

**Pots & tubs:** Use as above for individual plants, or you can apply as a decorative dressing around all your plants to cover the entire top of the pot or tub.

Please note: The product works best on newly planted pots and tubs, as established pots & tubs may already have slugs and snails present, so control could be reduced.

- ✓ Safe to use around children, pets and wildlife
- ✓ Provides a physical barrier against slugs and snails
- ✓ Natural product which is also suitable for organic gardening

#### General Advice

Do not apply in windy weather.

Supervise all children in the garden area during application and wash hands after use.

Children and pets can use the treated areas immediately after application.

Keep the carton stored in a dry place away from children and pets.

Contents may settle during transit.

\*Safe to use around children and pets when following the label instructions for use.
