## ecofective Organic Compost Maker 1.5L

## MADE IN BRITAIN ecofective®

**ORGANIC COMPOST MAKER** 

ecofective® Organic Compost Maker is produced from a blend of organic seaweed which is incredibly effective at stimulating natural bacteria to produce a nutrient rich compost. Completely safe for worms.

**Instructions for use:** Use on each 6-inch layer of added waste.

Measure 1litre of water into a watering can and add to this 250ml watering can and add to this 250ml of composting liquid.
Apply evenly over the waste material without mixing in. Apply again onto the next 6 inches of waste material.
During this building process keep the compost heap moist but not overwetted. If the compost is too wet, it will rot and turn into a liquid form.

After use, leave the cap loose so that the product can vent as it contains live bacteria, this will reduce bloating of the bottle.

Advice: Store concentrate in the bottle out of the reach of children and pets. Store out of direct sunlight. Keep container upright during storage and transit. Wash hands after use.

Recycled and Recyclable This bottle is made from 100% recycled materials. Bottle and cap are recyclable. HDPE PP
